EXPERIENCES

TOLL GROUP
Automation Developer — *September 2025 – Present*

• Enterprise Automation & AI

- Design, build and support AI document processing that extracts shipment data from carrier arrival notices and posts it to CargoWise One, with human-in-the-loop validation and automatic ServiceNow incidents for exceptions.
- Built multi-carrier milestone tracking across 10 airlines and 10 ocean carriers using Python and Power Automate Desktop, converting web data into CargoWise-ready records.
- Developed a Power Apps exception solution that validates carrier data against CargoWise, redesigning updates into a stage-and-commit pattern with a single XML submission.
- Automated customs declaration processing through CargoWise eAdaptor with XML validation and an audit workflow.

• Integration, Platform & DevOps

- Build and troubleshoot CargoWise One integrations using Native XML, the Universal API, eAdaptor and REST APIs.
- Automate shared mailbox processing with Microsoft Graph and Power Automate.
- Manage Power Platform ALM with managed solutions and Dev to Prod pipelines in Azure DevOps.
- Deployed a Python Azure Function App connected to Azure AI Foundry, including VNet integration and private endpoints.
- Build Power BI dashboards for operational and AI processing monitoring.
- Gather business requirements and provide production support across all automation solutions.

FCS SOLUTIONS
Software Engineer — *November 2022 – September 2025*

• Development Team

- Build and maintain unit tests.
- Understanding of SCRUM/AGILE framework.
- Design and build SQL queries (stored procs and ORM).
- Performs other duties as and when required by the management.
- Design and build backend processes and web services (REST) in Python with Flask.
- Develop and enhance features and components that will be utilized across entire platform.
- Work closely with Product, Design, Ops and QA teams to analyse, design, build, test, deploy and maintain multiple system components and applications.
- Designed databases, integrated REST APIs exchanging JSON and XML, tuned performance and supported production systems.

TOP GLOVE SDN BHD @ FACTORY 9
Automation Engineer — *May 2020 – October 2022*

• Operation Team (Artificial Intelligence Vision Camera)

- Operates and maintain an Artificial Intelligence Vision Camera (AIVC) for glove inspection and rejection automated systems.
- Install AIVC system software and hardware for new lines and ensure the overall system can run efficiently.
- Create a new project to improve operations by automating processes to reduce manpower and resources.
- Create a user manual, specifications, a bill of materials, a standard operating procedure, and a handbook.
- Overseeing performance, breakdown, and handle the situation immediately for first level support.
- Operate and troubleshoot issues and follow up regularly to maintain system efficiency.
- Guide and train end users on functionality, operation, maintenance, troubleshooting.
- Coordinate between teams such as the Big Data team, the QA department and more.
- Simplifying processes improves efficiency in the development of AI projects.
- Get feedback from end users to better improve the current system.

• Operation Team (Fully Unstripped Removal System)

- In charge to deal with assigned plants for installation. Managed the documentation for overall project progress from quotation and installation.

• Team Leader (Integration of Indexing Arm Set with Artificial Intelligence)

- In charge to come out with the design for overall system. Major project as the installation covered all plants.

PROJECTS

PORTFOLIO AUTOMATION (TELEGRAM BOT CI/CD) *2026*

Built a Telegram bot that turns plain-language messages into validated updates to the portfolio content and commits them via the GitHub Contents API. GitHub Actions rebuilds and deploys the site to GitHub Pages automatically, with Git history as the audit trail and rollback.

SHOPEE BUDGET OPTIMIZER *Personal project*

Python service that adjusts Shopee ad budgets based on ROAS, detects spending anomalies and sends Telegram alerts, with a React dashboard. Deployed on a VPS with SQLite storage.

DASHBOARD FOR PROJECTS PROGRESS *March – April 2022*

Developed a dashboard for overall project progress for the team. Created a template project timeline and progress for all projects with Excel. Used Power Apps for data collection. Visualised the overall project progress with Microsoft Power Bi.

FULLY UNSTRIPPED REMOVAL SYSTEM *Dec 2021 – Jan 2022*

FURS is used to remove half-stripped (single arm) and unstripped gloves from the former to prevent double dip and the formation of latex marks. The objectives of this system are to 100% remove detected defect gloves such as half-stripped, unstripped, and finger leftover; to prevent double dipping from occurring; to prevent latex marks from happening; and to make 100% removal of OQI and MQI possible. The designing process is used in Solid work and Microsoft Excel (Pivot Table) for data compilation.

INDEXING ROBOTIC ARM SET *Dec 2021 – Jan 2022*

The objectives of installing the Indexing Robotic Arm Set System are to detect the problematic carrier set that is producing a high number of defects, to alert the factory PICs about the problematic carrier set, and to prevent the problematic carrier set from continue to create defective gloves. The designing process is used in Solid work and Microsoft Excel (Pivot Table) for data compilation.

CERTIFICATES

Graduate Engineer *September 2021*
Analysing Data with Power BI *February 2022*
Microsoft Azure Data Fundamentals *February 2022*
PCEP-Certified Entry-Level Python Programmer *March 2022*
APU Certified Data Analyst Associate *April 2022*
AWS Cloud Practitioner *August 2026*

EDUCATIONS

INTERNATIONAL ISLAMIC UNIVERSITY MALAYSIA *2016 – 2020*
• Bachelor of Engineering (Mechatronics) (Honours) | CGPA: 3.260

CENTRE FOR FOUNDATION STUDIES, IIUM *2014 – 2015*
• Foundation in Engineering and Computer Sciences | CGPA: 3.074

ACHIEVEMENTS

Artificial Intelligence Vision Camera

- Cost-saving and reduction and manpower
- Successfully removed at least 40 OQI (online quality inspection) worker as for the implementation of AI Vision Camera. 1 OQI worker = RM2000/month.
- In house PLC programming to save RM10 000 per line over 300+ production lines. Projected cost saving = RM 5 000000.
- Lowered DPM and PSI of production thus reduced the company losses.

SKILLS

TECHNICAL

- Microsoft Office Package
- Microsoft Power BI
- Python Programming
- PLC Programming (Delta & Siemens)
- Solid works

PERSONAL

- Leadership
- Team player
- Communication
- Fast learner and adaptive
- Decision making
- Critical thinking
- Problem solving
- Troubleshooting skills
- Project management
